

Installing Hindi in Windows XP (Windows XP CD may be required for the same)

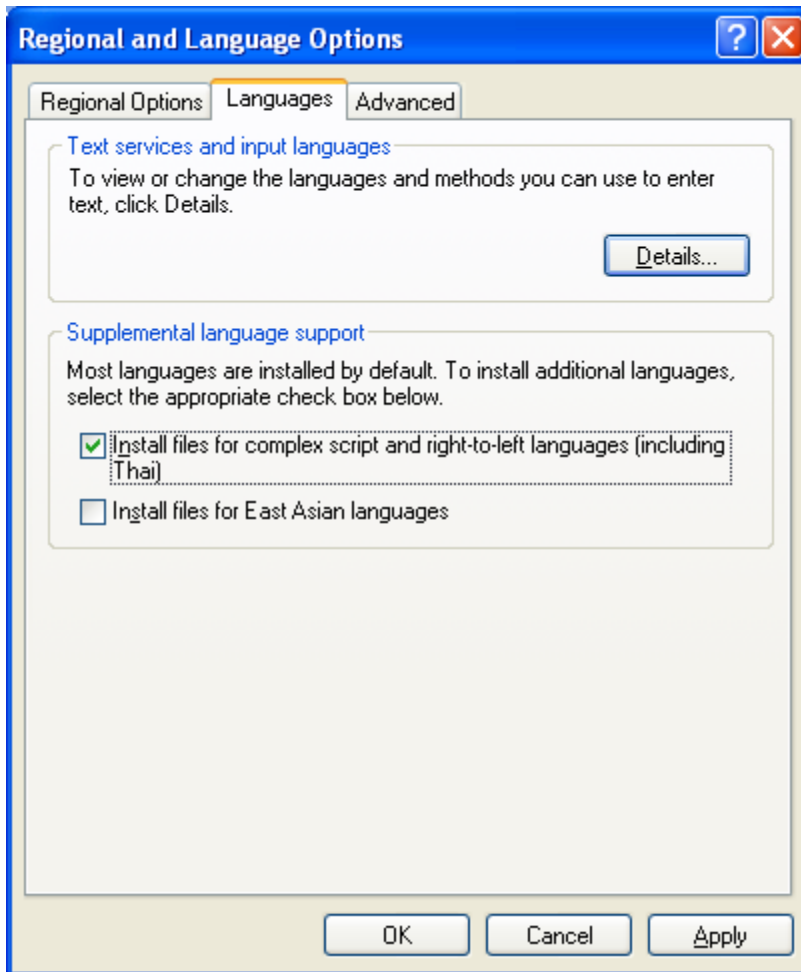

1) Click on "Start->Control Panel->(Date, Time, Language and Regional Options)->**Regional and Language Options**"

See screen's snapshot below for better understanding

2) Click on '**Languages**' tab (next to 'Regional Options') at the top

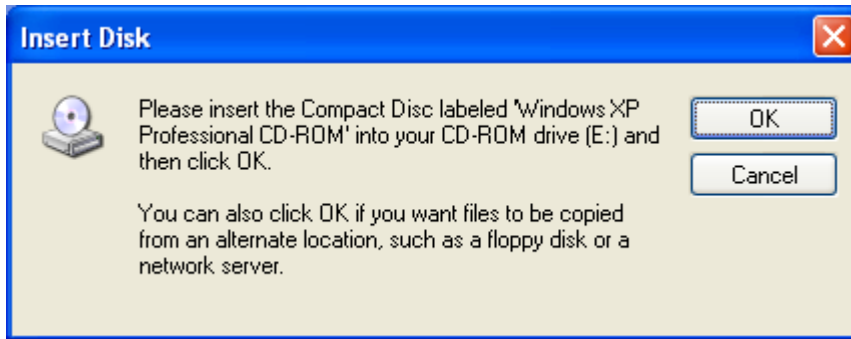

3) In 'Supplemental language support', see whether "**Install files for complex script and right to left languages (including thai)**" is kept ticked

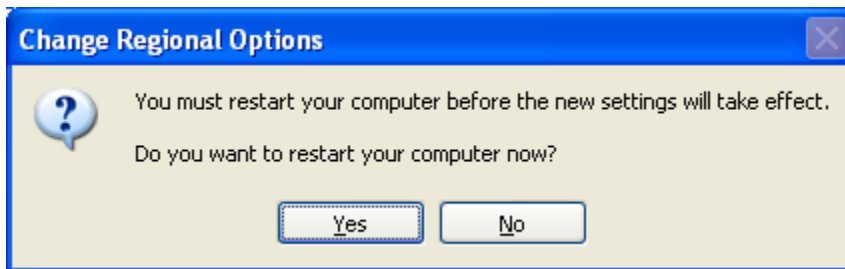

4) If ticked, leave it as it is. If not ticked, tick it and following message will be displayed.

5) It will start installing some required files and **Windows XP CD** may be required to complete the process

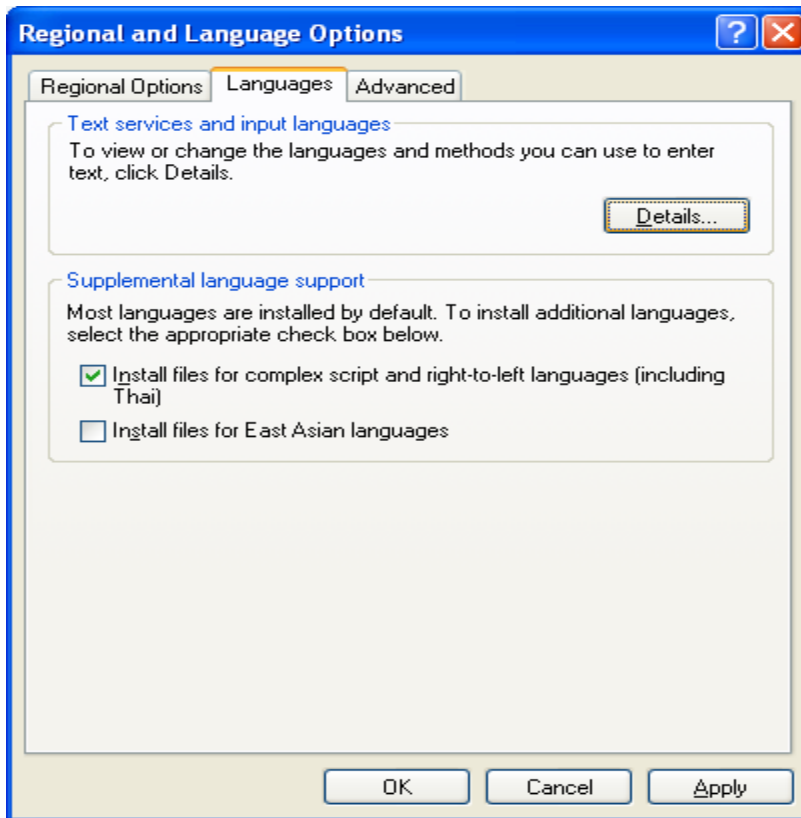

6) You will have to click '**Yes**' to **restart** the machine for the new setting to take effect.

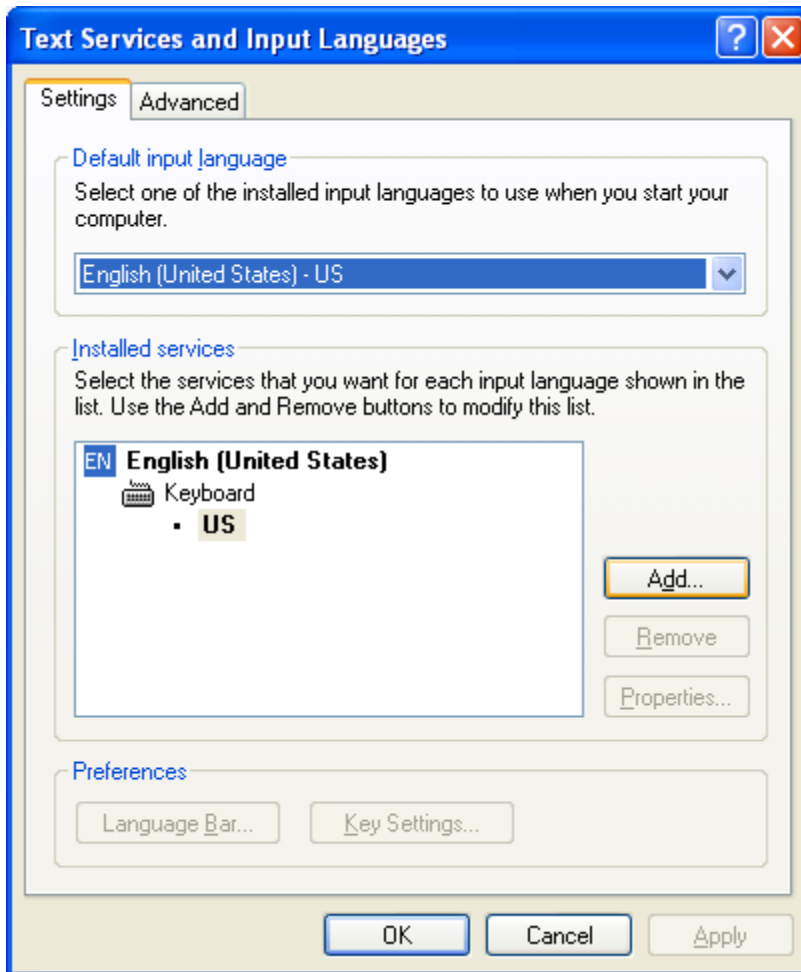

Enable Unicode in your computer:

- 1) Click on "Start->Control Panel->(Date, Time, Language and Regional Options)->**Regional and Language Options**"
- 2) Click on '**Languages**' tab (next to 'Regional Options') at the top

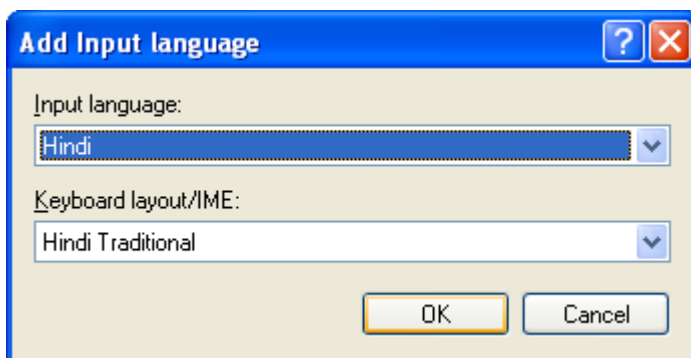

3) Click on '**Details**' button , following screen will appear

4) Under '**Installed services**' you will find your default Language/Keyboard selected - most often it will be EN and US

5) Now, click '**Add**' button. Click on the listbox titled '**Input language**'. Scroll down or up the list to select '**Hindi**'.

- 6) Click 'OK'.
- 7) Under 'Installed services' you will now find two entries 'EN' and 'HI'.

- 8) Click OK.

Now in Taskbar '**EN**' icon will be displayed. Click it, **EN** and **HI** will be shown.

Now click **EN** to enter data in English and **HI** to enter data in Hindi as per your requirement.
